LIONEX ESAT6 IgM antibody ELISA
100030
Mycobacterium tuberculosis ESAT6 single antigen (SAG) ELISA for detection of human IgM
The <i>Mycobacterium tuberculosis</i> ESAT6 antigen (Early secreted antigenic target, EsxA, Rv3875) is a dominant target for cell mediated immunity in the early phase of tuberculosis (TB) in TB patients as well as in various animal models. The protein is identified in short time culture filtrates of <i>M. tuberculosis</i> . ESAT6 is not found in <i>M. bovis</i> BCG. Its function is not known but it elicits high level of IFN-gamma from memory effector cells during the first phase of a protective immune response.
The LIONEX ESAT6 IgM antibody detection ELISA test kit is suitable for rapid and reliable detection and quantitative determination of IgM antibodies against ESAT6 in serum and plasma.
E. coli
Microtiter plate was coated with <i>M. tuberculosis</i> ESAT6 antigen
Enzyme Linked Immunosorbent Assay (ELISA) for detection of human IgM with coated antigen
confidential
2 - 8°C
LIONEX GmbH, Salzdahlumer Straße 196, Gebäude 1a, D-38126 Braunschweig, Germany
