Influenza Reagent
Influenza anti-B/Jiangsu/10/2003 HA Serum.
NIBSC code: 04/242
Instructions for use
(Version 3.0, Dated 03/04/2008)

1. INTENDED USE
Influenza antiserum reagent 04/242 is prepared in sheep for single radial diffusion assay of B/Jiangsu/10/2003 antigens. An appropriate NIBSC antigen reagent should be included in each assay.

2. CAUTION
This preparation is not for administration to humans or animals in the human food chain.

The material is not of human or bovine origin. As with all materials of biological origin, this preparation should be regarded as potentially hazardous to health. It should be used and discarded according to your own laboratory’s safety procedures. Such safety procedures should include the wearing of protective gloves and avoiding the generation of aerosols. Care should be exercised in opening ampoules or vials, to avoid cuts.

3. UNITAGE
No unitage is assigned to this material.

4. CONTENTS
Country of origin of biological material: United Kingdom.
The antiserum reagent was prepared in sheep 436 and 437 to the purified HA of B/Jiangsu/10/2003 virus. The HA antigen was extracted from purified virus by treatment with bromelain and purified by sedimentation on sucrose gradients (Brand, CN and Skehel, JJ, Nature, New Biology, 1972, 238, 145-147).
The immunization schedule for both sheep was as follows: One dose of approximately 50 micrograms of HA with Freund’s Complete Adjuvant (FCA) was given intramuscularly, followed two weeks later with a 20 microgram dose including Freund’s Incomplete Adjuvant (FIA), two further 20 microgram doses including FIA were given at weekly intervals. Five and a half weeks after the initial immunization, serum was collected and sodium azide (0.05% w/v) was added.
The sera were pooled, and diluted 1:3.8 with PBS buffer containing sodium azide (0.05% w/v) and filled into vials in 2ml volumes. The mean weight of 42 vials tested was 2.07g with a coefficient of variation of 0.14%.

5. STORAGE
+2-8ºC
Please note: because of the inherent stability of lyophilized material, NIBSC may ship these materials at ambient temperature.

6. DIRECTIONS FOR OPENING
Vials have a “flip-up” circular cap. Either on the cap or the collar of the vial, there is an indication of the point at which to lever off the cap. This exposes an area of the stopper through which reconstitution and withdrawal of the preparation can be made using a hypodermic needle and syringe. If use of a pipette is preferred, then fully remove the metal collar using, for example, forceps, taking care to avoid cuts by wearing appropriate gloves. Remove the stopper for access. Care should be taken to prevent loss of the contents.

7. USE OF MATERIAL
No attempt should be made to weigh out any portion of the material.
For the assay of antigens containing 20-50 micrograms of HA activity in 1ml, approximately 10µl of undiluted reagent should be added to 1ml agarose. Antigens of lower concentration (5-20 micrograms HA/ml) are assayed by adding 5µl of the reagent to 1ml agarose. It may be necessary to change these antiserum concentrations according to local laboratory conditions.
Antiserum Reagent 00/442 should be used according to the method described by Wood, JM, Schild, GC, Newman, RW and Seagroatt, VA Jornal of Biological Standarisation, 1977, 5, 237-247.

8. STABILITY
It is the policy of WHO not to assign an expiry date to their international reference materials. They remain valid with the assigned potency and status until withdrawn or amended.

Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label. Once reconstituted, diluted or aliquoted, users should determine the stability of the material according to their own method of preparation, storage and use.

NIBSC follows the policy of WHO with respect to its reference materials.

Users who have data supporting any deterioration in the characteristics of any reference preparation are encouraged to contact NIBSC. Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label.

**Toxicological properties**

- Effects of inhalation: Avoid inhalation
- Effects of ingestion: Avoid ingestion
- Effects of skin absorption: Avoid contact with skin

**Suggested First Aid**

- Inhalation: Seek medical advice
- Ingestion: Seek medical advice
- Contact with eyes: Wash with copious amounts of water. Seek medical advice
- Contact with skin: Wash thoroughly with water.

**Action on Spillage and Method of Disposal**

- Spillage of ampoule contents should be taken up with absorbent material wetted with an appropriate disinfectant. Rinse area with an appropriate disinfectant followed by water.
- Absorbent materials used to treat spillage should be treated as biological waste.

15. **LIABILITY AND LOSS**

In the event that this document is translated into another language, the English language version shall prevail in the event of any inconsistencies between the documents.

Unless expressly stated otherwise by NIBSC, NIBSC’s Standard Terms and Conditions for the Supply of Materials (available at http://www.nibsc.org/About_Us/Terms_and_Conditions.aspx or upon request by the Recipient) (“Conditions”) apply to the exclusion of all other terms and are hereby incorporated into this document by reference. The Recipient’s attention is drawn in particular to the provisions of clause 11 of the Conditions.

Attached: Yes SH436 SH437
Veterinary Certificate

This is to certify that Sheep no. 4032 [Virology No. SH 436] was used for the production of blood antiserum between 28-April-04 and 7-Jun-04.

This sheep was a ewe that was surplus to breeding requirements, in overt good health, and showed no signs of clinical disease.

The ear tag identifying the animal indicated that it was of UK origin.
