Influenza Reagent
Influenza Anti N1 Neuraminidase Serum SH485
NIBSC code: 08/126

Instructions for use
(Version 3.0, Dated 22/08/2011)

1. INTENDED USE
Influenza antisera reagent 08/126 is prepared in sheep for neuraminidase
identity tests.

2. CAUTION
This preparation is not for administration to humans or animals in
the human food chain.

The material is not of human or bovine origin. As with all materials of
biological origin, this preparation should be regarded as potentially
hazardous to health. It should be used and discarded according to your
own laboratory's safety procedures. Such safety procedures should
include the wearing of protective gloves and avoiding the generation of
aerosols. Care should be exercised in opening ampoules or vials, to
avoid cuts.

3. UNITAGE
No unitage is assigned to this material.

4. CONTENTS
Country of origin of biological material: United Kingdom.
The antisera was prepared in a SHEEP (SH485) to NIBRG-74 (H7N1)
virus. NIBRG-74, prepared by reverse genetics at NIBSC, is a reassortant
between A/equine/Prague/1/56 (H7N7) and A/turkey/Turkey/1/05 (H5N1)
viruses. One dose of approximately 20 micrograms of virus protein with
Freund's complete adjuvant (FCA) was given intramuscularly, a further
dose of approximately 10 micrograms with Freund's incomplete adjuvant
(FIA), was given two weeks later. This was followed by a further six 10
microgram doses, with FIA, at weekly intervals.

Nine and half weeks after the initial immunization, serum was collected,
sodium azide was added (0.05% w/v). The serum was treated using an
APHIS approved method for inactivation of FMD virus, see attach
certificate. The serum was filled into vials in 1ml volumes. The mean
weight of 25 vials test weighed was 1.0308g with a coefficient of variation of
0.0648%.

5. STORAGE
+2-8°C
Please note: because of the inherent stability of lyophilized
material, NIBSC may ship these materials at ambient temperature.

6. DIRECTIONS FOR OPENING
Vials have a ‘flip-up’ circular cap. Either on the cap or the collar of
the vial, there is an indication of the point at which to lever off the cap. This
exposes an area of the stopper through which reconstitution and
withdrawal of the preparation can be made using a hypodermic needle
and syringe. If use of a pipette is preferred, then fully remove the metal
collar using, for example, forceps, taking care to avoid cuts by wearing
appropriate gloves. Remove the stopper for access. Care should be
taken to prevent loss of the contents.

7. USE OF MATERIAL
No attempt should be made to weigh out any portion of the
material
Reagent 08/126 should be used in tests of neuraminidase identity, such as
the neuraminidase inhibition (NI) test of Aymard-Henry M, Coleman MT,
Dowdle WR, Laver WG, Schild GC and Webster RG. Bull WHO, 1973, 48,
199-202. Although Reagent 08/126 does not have a unitage, in NI tests
titres are usually as indicated in the Appendix.

8. STABILITY
It is the policy of WHO not to assign an expiry date to their international
reference materials. They remain valid with the assigned potency and
status until withdrawn or amended.

Reference materials are held at NIBSC within assured, temperature-
controlled storage facilities. Reference Materials should be stored on
receipt as indicated on the label. Once reconstituted, diluted or
 aliquoted, users should determine the stability of the material according
to their own method of preparation, storage and use.

NIBSC follows the policy of WHO with respect to its reference materials.
Users who have data supporting any deterioration in the characteristics
of any reference preparation are encouraged to contact NIBSC.
Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be
stored on receipt as indicated on the label.

10. ACKNOWLEDGEMENTS
This reagent was produced on behalf of the FLUSECURE project with
funding from the EU.

11. FURTHER INFORMATION
Further information can be obtained as follows;

12. CUSTOMER FEEDBACK
Customers are encouraged to provide feedback on the suitability or use
of the material provided or other aspects of our service. Please send
any comments to enquiries@nibsc.org

13. CITATION
In all publications, including data sheets, in which this material is
referred, it is important that the preparation's title, its status, the
NIBSC code number, and the name and address of NIBSC are cited
and cited correctly.

**Toxicological properties**

- Effects of inhalation: No adverse effects have been reported
- Effects of ingestion: No adverse effects have been reported
- Effects of skin absorption: No adverse effects have been reported

**Suggested First Aid**

- **Inhalation:** Seek medical advice
- **Ingestion:** Seek medical advice
- **Contact with eyes:** Wash with copious amounts of water. Seek medical advice
- **Contact with skin:** Wash thoroughly with water.

**Action on Spillage and Method of Disposal**

Spillage of ampoule contents should be taken up with absorbent material wetted with an appropriate disinfectant. Rinse area with an appropriate disinfectant followed by water. Absorbent materials used to treat spillage should be treated as biological waste.

15. **LIABILITY AND LOSS**

In the event that this document is translated into another language, the English language version shall prevail in the event of any inconsistencies between the documents.

Unless expressly stated otherwise by NIBSC, NIBSC’s Standard Terms and Conditions for the Supply of Materials (available at http://www.nibsc.org/About_Us/Terms_and_Conditions.aspx or upon request by the Recipient) (“Conditions”) apply to the exclusion of all other terms and are hereby incorporated into this document by reference. The Recipient’s attention is drawn in particular to the provisions of clause 11 of the Conditions.

VETERINARY CERTIFICATE OF ANIMAL HEALTH

This is to certify that I have today examined a Sheep with ear tag number: UK 12241 5462 [Virology no SH 485], which has been used in the production of blood antiserum between 6th February 2008 and 9th April 2008. Both the ear tag number and the animals’ record show that it is of UK origin.

This animal was a breeding Ewe which became surplus to requirements. In my opinion at the time of clinical examination, the ewe was in good health and showed no clinical signs of infectious disease.

Foot and Mouth Disease Virus Inactivation Certificate

This is to certify that serum collected from Sheep with ear tag no: UK 12241 5462 [Virology no. SH485 ] has been treated by an APHIS approved method for inactivation of Foot and Mouth Disease Virus. The treatment method used was maintenance of pH 5.5 or lower for a minimum of 30 minutes.

NB This data is presented in order to provide an indication of the likely titre of this reagent in a *standard enzyme inhibition assay, on the understanding that individual test results will vary.

STORAGE OF REAGENT 08/126

NIBSC has prepared a number of reagents for single radial diffusion assay of influenza subtypes of pandemic potential.

Since it is not known when these reagents may be required, it is desirable that they have an indefinite shelf life and they are stored at NIBSC in colder conditions than reagents prepared for the assay of epidemic strains. Therefore the recommended storage temperature marked on the label for reagent 08/126 is -20°C.

However it is assumed that a customer ordering this reagent, will use it within a short period similar to that for a conventional reagent. Consequently, this reagent is not normally shipped frozen and the recommended storage temperature is +4°C.
