Influenza Reagent
Influenza Anti A/California/7/2009 (N1) NA Serum (Sheep SH 521)
NIBSC code: 10/218
Instructions for use
(Version 3.0, Dated 11/08/2016)

1. INTENDED USE
Influenza antiserum reagent 10/218 is prepared in sheep for neuraminidase identity tests.

2. CAUTION
This preparation is not for administration to humans or animals in the human food chain.

The material is not of human or bovine origin. As with all materials of biological origin, this preparation should be regarded as potentially hazardous to health. It should be used and discarded according to your own laboratory’s safety procedures. Such safety procedures should include the wearing of protective gloves and avoiding the generation of aerosols. Care should be exercised in opening ampoules or vials, to avoid cuts.

3. UNITAGE
No unitage is assigned to this material.

4. CONTENTS
Country of origin of biological material: United Kingdom.
The antiserum was prepared in a sheep (SH 521) to NIBRG-127 (H7N1) virus. NIBRG-127 is a reassortant developed at NIBSC with the HA gene from A/Prague/56 (H7N7), the NA gene from A/California/7/2009 (H1N1) and the six internal genes from A/PR/8/34 (H1N1). One dose of approximately 10 micrograms of purified virus with Freund’s complete adjuvant (FCA) was given intramuscularly. A further dose of approximately 10 micrograms, with Freund’s incomplete adjuvant (FIA), was given after two weeks. This was followed by three further doses of 10 micrograms with FIA, at weekly intervals.
Six weeks after the initial immunization, serum was collected and sodium azide (0.05% w/v) was added. The serum was then treated by an APHIS approved method for the inactivation of FMDV, then diluted 2:1 with PBS buffer containing sodium azide (0.05% w/v) and filled into vials in 1ml volumes.

5. STORAGE
The recommended storage temperature is +2-8°C. However, if it is intended to store the reagent for long periods i.e. > 2 years, they may be stored at -20°C. The antiserum can be frozen and thawed without any adverse impact.

Please note: because of the inherent stability of lyophilized material, NIBSC may ship these materials at ambient temperature.

6. DIRECTIONS FOR OPENING
Vials have a ‘flip-up’ circular cap. Either on the cap or the collar of the vial, there is an indication of the point at which to lever off the cap. This exposes an area of the stopper through which reconstitution and withdrawal of the preparation can be made using a hypodermic needle and syringe. If use of a pipette is preferred, then fully remove the metal collar using, for example, forceps, taking care to avoid cuts by wearing appropriate gloves. Remove the stopper for access. Care should be taken to prevent loss of the contents.

7. USE OF MATERIAL
No attempt should be made to weigh out any portion of the material
Reagent 10/218 should be used in tests of neuraminidase identity, such as the neuraminidase inhibition (NI) test of Aymard-Henry M, Coleman MT, Dowdle WR, Laver WG, Schild GC and Webster RG. Bull WHO, 1973, 48, 199-202.

8. STABILITY
It is the policy of WHO not to assign an expiry date to their international reference materials. They remain valid with the assigned potency and status until withdrawn or amended.

Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label. Once reconstituted, diluted or aliquoted, users should determine the stability of the material according to their own method of preparation, storage and use.

NIBSC follows the policy of WHO with respect to its reference materials.

Users who have data supporting any deterioration in the characteristics of any reference preparation are encouraged to contact NIBSC. Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label.

Flammable: No
Handling: See caution, Section 2

Other (specify): Contains Sheep Serum and Sodium Azide (0.05\% w/v)

**Toxicological properties**

- **Effects of inhalation:** Avoid inhalation
- **Effects of ingestion:** Avoid ingestion
- **Effects of skin absorption:** Avoid contact with skin

**Suggested First Aid**

- **Inhalation:** Seek medical advice
- **Ingestion:** Seek medical advice
- **Contact with eyes:** Wash with copious amounts of water. Seek medical advice
- **Contact with skin:** Wash thoroughly with water.

**Action on Spillage and Method of Disposal**

Spillage of ampoule contents should be taken up with absorbent material wetted with an appropriate disinfectant. Rinse area with an appropriate disinfectant followed by water. Absorbent materials used to treat spillage should be treated as biological waste.

15. **LIABILITY AND LOSS**

In the event that this document is translated into another language, the English language version shall prevail in the event of any inconsistencies between the documents.

Unless expressly stated otherwise by NIBSC, NIBSC’s Standard Terms and Conditions for the Supply of Materials (available at http://www.nibsc.org/About_Us/Terms_and_Conditions.aspx or upon request by the Recipient) (“Conditions”) apply to the exclusion of all other terms and are hereby incorporated into this document by reference. The Recipient’s attention is drawn in particular to the provisions of clause 11 of the Conditions.

16. **INFORMATION FOR CUSTOMS USE ONLY**

- **Country of origin for customs purposes\*:** United Kingdom
  - * Defined as the country where the goods have been produced and/or sufficiently processed to be classed as originating from the country of supply, for example a change of state such as freeze-drying.
- **Net weight:** 1g
- **Toxicity Statement:** Non-toxic
- **Veterinary certificate or other statement if applicable:** Attached: Yes SH521 SH521a
VETERINARY CERTIFICATE OF ANIMAL HEALTH

This is to certify that I have today examined a Sheep with ear tag number: UK 265 852 1381 [Virology no. SH521], which has been used in the production of blood antiserum between 14th April 2010 and 26th May 2010. Both the ear tag number and the animals’ record show that it is of UK origin.

This animal was a breeding Ewe which became surplus to requirements. In my opinion at the time of clinical examination, the ewe was in good health and showed no clinical signs of infectious disease.

Foot and Mouth Disease Virus Inactivation Certificate

This is to certify that serum collected from Sheep no. UK 265 852 1381 [Virology no.SH 521] has been treated by an APHIS approved method for inactivation of Foot and Mouth Disease Virus. The treatment method used was maintenance of pH5.5 or lower for a minimum of 30 minutes.
