Influenza Reagent
Influenza Anti-B/Wisconsin/1/2010-like HA serum
NIBSC code: 12/118

1. INTENDED USE
Influenza antiserum reagent 12/118 is prepared for single radial diffusion assay of B/Wisconsin/1/2010-like antigens using an appropriate NIBSC antigen reagent.

The antiserum reagent was prepared in sheep 541 and 542, to the purified HA of B/Hubei-Wujiaxiang/158/2009 (NYMCBX-39). Sheep 554, 565, 566 and 567 were immunized with both purified HA from B/Hubei-Wujiaxiang/158/2009 (NYMCBX-39) and (NYMCBX-41A). The HA antigens were extracted from purified virus by treatment with bromelain and purified by sedimentation on sucrose gradients (Brand, CN and Skehel, JJ, Nature, New Biology, 1972, 238, 145-147).

2. CAUTION
This preparation is not for administration to humans or animals in the human food chain.

The material is not of human or bovine origin. As with all materials of biological origin, this preparation should be regarded as potentially hazardous to health. It should be used and discarded according to your own laboratory's safety procedures. Such safety procedures should include the wearing of protective gloves and avoiding the generation of aerosols. Care should be exercised in opening ampoules or vials, to avoid cuts.

3. UNITAGE
No unitage is assigned to this material.

4. CONTENTS
Country of origin of biological material: United Kingdom.

The immunization schedule for sheep 541 and 542 was as follows: One dose of approximately 50 µg of NYMCBX-39 HA with Freund's Complete Adjuvant (FCA) was given intramuscularly, followed two weeks later with a 10 microgram dose of including Freund's Incomplete Adjuvant (FIA). Seven further 10 microgram dose of NYMCBX-39 HA including FIA were given at one week intervals. Ten weeks after the initial immunization, serum was collected and sodium azide (0.05% w/v) added. The immunization schedule for sheep 554 and 565 was as follows: One dose of approximately 50 µg of NYMCBX-39 HA with Freund's Complete Adjuvant (FCA) was given intramuscularly, followed two weeks later with a 10 microgram dose of including Freund's Incomplete Adjuvant (FIA). Two further 10 microgram dose of NYMCBX-41A HA including FIA were given at one week intervals. Five weeks after the initial immunization, serum was collected and sodium azide (0.05% w/v) added. The immunization schedule for sheep 566 and 567 was as follows: One dose of approximately 50 µg of NYMCBX-39 HA with Freund's Complete Adjuvant (FCA) was given intramuscularly, followed two weeks later with a 10 microgram dose of NYMCBX-41A including Freund's Incomplete Adjuvant (FIA). Three further 10 microgram dose of NYMCBX-41A HA including FIA were given at one week intervals. Six weeks after the initial immunization, serum was collected and sodium azide (0.05% w/v) added. The serum was then pooled and treated by an APHIS approved method for the inactivation of FMDV. The serum was then dilute 1:2.5 with PBS buffer containing sodium azide (0.05% w/v) and filled into vials in 2ml volumes.

5. STORAGE
The recommended storage temperature is +2-8°C. However, if it is intended to store the reagent for long periods i.e.>2yeares, they may be stored at -20°C. The antiserum can be frozen and thawed without any adverse impact on use in the SRD assay.

6. DIRECTIONS FOR OPENING
Vials have a screw cap; an internal stopper may also be present. The cap should be removed by turning anti-clockwise. Care should be taken to prevent loss of the contents. Please note: If a stopper is present on removal of the cap, the stopper should remain in the vial or be removed with the cap.

7. USE OF MATERIAL
For the assay of antigens containing 20-50 micrograms of HA activity in 1ml, 12-18 µl of the undiluted reagent should be added to 1ml agarose. It may be necessary to change the antiserum concentrations according to local laboratory conditions.

Antiserum reagent 12/118 should be used according to the method described by Wood, JM, Schild, GC, Newman, RW and Seagroatt, VA. Journal of Biological Standardisation, 1977, 5, 2.

8. STABILITY
It is the policy of WHO not to assign an expiry date to their international reference materials. They remain valid with the assigned potency and status until withdrawn or amended.

Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label. Once reconstituted, diluted or aliquoted, users should determine the stability of the material according to their own method of preparation, storage and use.

NIBSC follows the policy of WHO with respect to its reference materials.

Users who have data supporting any deterioration in the characteristics of any reference preparation are encouraged to contact NIBSC. Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label.

VETERINARY CERTIFICATE OF ANIMAL HEALTH

This is to certify that I have today examined a sheep with ear tag number: UK 028 8289 0483 [Virology no. SHS41], which has been used in the production of blood antiserum between 20th April 2011 and 29th June 2011. Both the ear tag number and the animal’s record show that she is of UK origin.

This animal was a breeding ewe which became surplus to requirements. In my opinion at the time of clinical examination, the ewe was in good health and showed no clinical signs of infectious disease.

Signed

Lucy Whitfield MA VetMB DLAS MRCVS
Named Veterinary Surgeon
