Influenza Reagent
Influenza Anti-B/Massachusetts/02/2012 HA serum
NIBSC code: 13/182
Instructions for use
(Version 3.0, Dated 09/10/2014)

1. INTENDED USE
Influenza antiserum reagent 13/182 is prepared for single radial diffusion assay of B/Massachusetts/02/2012 antigens using an appropriate NIBSC antigen reagent.

The antiserum reagent was prepared in sheep 586, 587, 588, 589 and 590 to the purified HA of B/Massachusetts/02/2012 virus. The HA antigens were extracted from purified virus by treatment with bromelain and purified by sedimentation on sucrose gradients (Brand, CN and Skehel, JJ, Nature, New Biology, 1972, 238, 145-147).

2. CAUTION
This preparation is not for administration to humans or animals in the human food chain.

The material is not of human or bovine origin. As with all materials of biological origin, this preparation should be regarded as potentially hazardous to health. It should be used and discarded according to your own laboratory's safety procedures. Such safety procedures should include the wearing of protective gloves and avoiding the generation of aerosols. Care should be exercised in opening ampoules or vials, to avoid cuts.

3. UNTAGE
No untage is assigned to this material.

4. CONTENTS
Country of origin of biological material: United Kingdom.
The immunization schedules for the sheep were as follows:
Sheep 586; one dose of approximately 50µg of B/Massachusetts/02/2012 HA with Freund's Complete Adjuvant (FCA) was given intramuscularly, followed two weeks later with a 10 microgram dose of including Freund's Incomplete Adjuvant (FIA). Five further 10 microgram dose of B/Massachusetts/02/2012 including FIA were given at weekly intervals. Eight weeks after the initial immunization, serum was collected and sodium azide (0.05% w/v) added.
Sheep 587 and 588; one dose of approximately 50µg of B/Massachusetts/02/2012 HA with Freund's Complete Adjuvant (FCA) was given intramuscularly, followed two weeks later with a 10 microgram dose of including Freund's Incomplete Adjuvant (FIA), Six further 10 microgram dose of B/Massachusetts/02/2012 including FIA were given at weekly intervals. Nine weeks after the initial immunization, serum was collected and sodium azide (0.05% w/v) added.
Sheep 589 and 590; one dose of approximately 50µg of B/Massachusetts/02/2012 HA with Freund’s Complete Adjuvant (FCA) was given intramuscularly, followed two weeks later with a 10 microgram dose of including Freund's Incomplete Adjuvant (FIA). Eight further 10 microgram dose of B/Massachusetts/02/2012 including FIA were given at weekly intervals. Nine weeks after the initial immunization, serum was collected and sodium azide (0.05% w/v) added.
All five sheep sera were then treated by an APHIS approved method for the inactivation of FMDV. The treatment method used was maintenance of pH5.5 or lower for a minimum of 30 minutes.
The sera were pooled and then diluted 1:2.4 with PBS buffer containing sodium azide (0.05% w/v) and filled into vials in 2ml volumes.

5. STORAGE
The recommended storage temperature is +2.8°C. However, if it is intended to store the reagent for long periods i.e. >2 years, they may be stored at -20°C. The antiserum can be frozen and thawed without any adverse impact on use in the SRD assay.

6. DIRECTIONS FOR OPENING
Vials have a screw cap; an internal stopper may also be present. The cap should be removed by turning anti-clockwise. Care should be taken to prevent loss of the contents. Please note: If a stopper is present on removal of the cap, the stopper should remain in the vial or be removed with the cap.

7. USE OF MATERIAL
For the assay of antigens containing 20-50 micrograms of HA activity in 1ml, 12-15µl of the undiluted reagent should be added to 1ml agarose. It may be necessary to change the antiserum concentrations according to local laboratory conditions.
Antiserum Reagent 13/182 should be used according to the method described by Wood, JM, Schild, GC, Newman, RW and Seagroatt, VA. Journal of Biological Standardisation, 1977, 5, 2.

8. STABILITY
It is the policy of WHO not to assign an expiry date to their international reference materials. They remain valid with the assigned potency and status until withdrawn or amended.

Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label. Once reconstituted, diluted or aliquoted, users should determine the stability of the material according to their own method of preparation, storage and use.

NIBSC follows the policy of WHO with respect to its reference materials.

Users who have data supporting any deterioration in the characteristics of any reference preparation are encouraged to contact NIBSC. Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label.

Action on Spillage and Method of Disposal

Spillage of ampoule contents should be taken up with absorbent material wetted with an appropriate disinfectant. Rinse area with an appropriate disinfectant followed by water. Absorbent materials used to treat spillage should be treated as biological waste.

15. LIABILITY AND LOSS
In the event that this document is translated into another language, the English language version shall prevail in the event of any inconsistencies between the documents.

Unless expressly stated otherwise by NIBSC, NIBSC’s Standard Terms and Conditions for the Supply of Materials (available at http://www.nibsc.org/About_Us/Terms_and_Conditions.aspx or upon request by the Recipient) (“Conditions”) apply to the exclusion of all other terms and are hereby incorporated into this document by reference. The Recipient’s attention is drawn in particular to the provisions of clause 11 of the Conditions.

16. INFORMATION FOR CUSTOMS USE ONLY

* Defined as the country where the goods have been produced and/or sufficiently processed to be classed as originating from the country of supply, for example a change of state such as freeze-drying.
VETERINARY CERTIFICATE OF ANIMAL HEALTH

This is to certify that I have examined a Sheep with ear tag number: UK 028 8289 6141 [Virology no. SH586], which has been used in the production of blood antiserum between 6th March 2013 and 1st May 2013. Both the ear tag number and the animals’ record show that it is of UK origin.

This animal was a breeding Ewe which became surplus to requirements. In my opinion at the time of clinical examination, the ewe was in good health and showed no clinical signs of infectious disease.
