1. INTENDED USE
Freeze-dried preparation NIBSC 16/126 was prepared from Vi capsular polysaccharide of S. Typhi Salmonella enterica subspecies enterica serovar Typhi (Vi PS) manufactured by GSK Bio Rixensart Belgium. The freeze-dried material has been evaluated in physico-chemical and immuno assays and qualitative and quantitative assays to assess its suitability for use as a standard for Vi PS in final fills and bulks of Vi PS typhoid vaccines [1,2]. The Vi content was determined by qNMR, gravimetry, High Performance Anion Exchange Chromatography-Pulsed Amperometric Detection (HPAEC-PAD), Hestrin assay and immuno-assays [2].

2. CAUTION
This preparation is not for administration to humans or animals in the human food chain

The material is not of human or bovine origin. As with all materials of biological origin, this preparation should be regarded as potentially hazardous to health. It should be used and discarded according to your own laboratory’s safety procedures. Such safety procedures should include the wearing of protective gloves and avoiding the generation of aerosols. Care should be exercised in opening ampoules or vials, to avoid cuts.

3. UNTAGE
One ampoule contains 2.03 mg Vi PS per ampoule based on qNMR of Collaborative Study 574 [2].

4. CONTENTS
Country of origin of biological material: Belgium. Ampoules contain a robust loose cake. One ampoule contains 2.03 ± 0.10 mg Vi PS as determined by qNMR (expanded uncertainty with coverage factor of k=2.11). By HPAEC-PAD the amount is 1.92 mg Vi PS per ampoule. O-acetylation by Hestrin is 3.24 mmole/mg Vi PS (CV 29.1%, n=10). The level of O-acetylation by qNMR is 103% (CV 3.2%, n=8). The dry weight content determined by gravimetry is 1.70 mg (CV 9.5%, n=25); the moisture content is 4.1% (CV 16.8%, n=12) and the oxygen content is 0.35% (CV 27.6%, n=12).

5. STORAGE
Ampsoules should be stored at -20°C or 4°C
Please note: because of the inherent stability of lyophilized material, NIBSC may ship these materials at ambient temperature.

6. DIRECTIONS FOR OPENING
DIN ampoules have an ‘easy-open’ coloured stress point, where the narrow ampoule stem joins the wider ampoule body. Tap the ampoule gently to collect the material at the bottom (labelled) end. Ensure that the disposable ampoule safety breaker provided is pushed down on the stem of the ampoule and against the shoulder of the ampoule body. Hold the body of the ampoule in one hand and the disposable ampoule breaker covering the ampoule stem between the thumb and first finger of the other hand. Apply a bending force to open the ampoule at the coloured stress point, primarily using the hand holding the plastic collar. Care should be taken to avoid cuts and projectile glass fragments that might enter the eyes, for example, by the use of suitable gloves and an eye shield. Take care that no material is lost from the ampoule and no glass falls into the ampoule. Within the ampoule is dry nitrogen gas at slightly less than atmospheric pressure. A new disposable ampoule breaker is provided with each DIN ampoule.

7. USE OF MATERIAL
No attempt should be made to weigh out any portion of the freeze-dried material prior to reconstitution
Re-suspend the contents of the ampoule in 2.03 ml of distilled water. To ensure complete solubilisation of the material allow to dissolve for at least 2 hours at room temperature with gentle shaking followed by 12 hours/overnight at 4°C prior to use. The standard can be used directly in physico-chemical assays or immuno assay. The reconstituted material can be aliquotted and stored at 4°C or frozen at -20°C or below. The standard can be used directly in physico-chemical assays, immuno assays or for calibration of secondary standards [2]. The Vi standard is fully O-acetylated (103%), and is appropriate for the measurement of the Vi content of material that has a similar level of O-acetylation. If the standard is to be used for measuring the Vi content of Vi with a lower level of O-acetylation then a correction will have to be used, following the calculation of the formula weight as listed in Annex 2 of the ECBS report [2]. For example, for a sample with 80% O-acetylation, which has a residue weight of 272,790, the Vi content measured with the IS will need to be corrected by multiplying the measured µg Vi PS/ml content measured by a factor 0.97 (~ 272,790/281,196).

8. STABILITY
It is the policy of WHO not to assign an expiry date to their international reference materials.

They remain valid with the assigned potency and status until withdrawn or amended. Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label. NIBSC follows the policy of WHO with respect to its reference materials.

Accelerated degradation studies revealed the freeze-dried standard to be stable up to two years at 37°C. Material reconstituted at 1 mg/ml is stable for 1 year at +4°C and -20°C by HPAEC-PAD, for other assays the appropriate storage temperature for reconstituted aliquots should be determined and validated by the customer. Real-time and extended accelerated thermal degradation studies are ongoing.

9. REFERENCES

10. ACKNOWLEDGEMENTS
Drs T Pronce and O Germay of GSK Bio for donation of the Vi PS, technical assistance and support. The Coalition against Typhoid of the Albert B Sabin Vaccine Institute for financial support.

**Toxicological properties**

| Effects of inhalation: | Not established, avoid inhalation |
| Effects of ingestion: | Not established, avoid ingestion |
| Effects of skin absorption: | Not established, avoid contact with skin |

**Suggested First Aid**

| Inhalation: | Seek medical advice |
| Ingestion: | Seek medical advice |
| Contact with eyes: | Wash with copious amounts of water. Seek medical advice |
| Contact with skin: | Wash thoroughly with water. |

**Action on Spillage and Method of Disposal**

Spillage of ampoule contents should be taken up with absorbent material wetted with an appropriate disinfectant. Rinse area with an appropriate disinfectant followed by water. Absorbent materials used to treat spillage should be treated as biological waste.

15. LIABILITY AND LOSS
In the event that this document is translated into another language, the English language version shall prevail in the event of any inconsistencies between the documents.

Unless expressly stated otherwise by NIBSC, NIBSC's Standard Terms and Conditions for the Supply of Materials (available at http://www.nibsc.org/About_Us/Terms_and_Conditions.aspx or upon request by the Recipient) (“Conditions”) apply to the exclusion of all other terms and are hereby incorporated into this document by reference. The Recipient's attention is drawn in particular to the provisions of clause 11 of the Conditions.

16. INFORMATION FOR CUSTOMS USE ONLY

| Country of origin for customs purposes*: United Kingdom |
| Country of production or place of manufacture: United Kingdom |
| Net weight: 0.0017 g |
| Toxicity Statement: Non-toxic |
| Veterinary certificate or other statement: if applicable. Attached: No |

17. CERTIFICATE OF ANALYSIS

NIBSC does not provide a Certificate of Analysis for WHO Biological Reference Materials because they are internationally recognised primary reference materials fully described in the instructions for use. The reference materials are established according to the WHO Recommendations for the preparation, characterization and establishment of international and other biological reference standards.

http://www.who.int/bloodproducts/publications/TRS932Annex2_Inter_biofstandardsrev2004.pdf (revised 2004). They are officially endorsed by the WHO Expert Committee on Biological Standardization (ECBS) based on the report of the international collaborative study which established their suitability for the intended use.
