Influenza Reagent
Influenza Virus Infectious X-361A (H3N2)
NIBSC code: 21/190
Instructions for use
(Version 2.0, Dated 11/07/2022)

1. INTENDED USE
Reagent 21/190 is prepared from X-361A, a HGR derived from A/Cambodia/E0826360/2020 (H3N2) which was processed in 250μl volumes as liquid stock. The derivation and known passage history of X-361A (H3N2) is attached.

2. CAUTION
This preparation is not for administration to humans or animals in the human food chain. The material is not of human or bovine origin.

3. UNITAGE
No unitage is assigned to this material

4. CONTENTS
Country of origin of biological material: United Kingdom.
Each vial contains 250μl (nominal) of infectious influenza virus as allantoic fluid from SPF embryonated hen’s eggs.

5. STORAGE
Store in the dark at -700C or below

6. DIRECTIONS FOR OPENING
Vials have a screw cap; an internal stopper may also be present. The cap should be removed by turning anti-clockwise. Care should be taken to prevent loss of the contents. Please note: If a stopper is present on removal of the cap, the stopper should remain in the vial or be removed with the cap.

7. USE OF MATERIAL
Ready to use

8. STABILITY
Reference Materials should be stored on receipt as indicated on the label.

NIBSC follows the policy of WHO with respect to its reference materials.

9. REFERENCES
NA

10. ACKNOWLEDGEMENTS
NA

11. FURTHER INFORMATION
Further information can be obtained as follows:

12. CUSTOMER FEEDBACK
Customers are encouraged to provide feedback on the suitability or use of the material provided or other aspects of our service. Please send any comments to enquiries@nibsc.org

13. CITATION
In all publications, including data sheets, in which this material is referenced, it is important that the preparation’s title, its status, the NIBSC code number, and the name and address of NIBSC are cited and cited correctly.

14. MATERIAL SAFETY SHEET
Classification in accordance with Directive 2000/54/EC, Regulation (EC) No 1272/2008: Not applicable or not classified

Suggested First Aid

- Inhalation: Seek medical advice
- Ingestion: Seek medical advice
- Contact with eyes: Wash with copious amounts of water. Seek medical advice
- Contact with skin: Wash thoroughly with water.

Action on Spillage and Method of Disposal

Spillage of contents should be taken up with absorbent material wetted with an appropriate virucidal agent. Rinse area with an appropriate virucidal agent followed by water. Absorbent materials used to treat spillage should be treated as biologically hazardous waste.

15. LIABILITY AND LOSS
In the event that this document is translated into another language, the English language version shall prevail in the event of any inconsistencies between the documents. Unless expressly stated otherwise by NIBSC, NIBSC’s Standard Terms and Conditions for the Supply of Materials (available at http://www.nibsc.org/About_Us/Terms_and_Conditions.aspx or upon request by the Recipient) (“Conditions”) apply to the exclusion of all
other terms and are hereby incorporated into this document by reference. The Recipient’s attention is drawn in particular to the provisions of clause 11 of the Conditions.

Sterility: No visible contamination was detected in a variety of media (tryptose soya broth, thioglycolate broth, Sabouraud’s broth and blood agar plates) after 14 days incubation.

The HA and NA sequence of this virus is available at GISAID with the accession number EPI_ISL_3039335.

Derivation of NYMC X-361 High Yield H3N2 Reassortant (6:2) with A/PR/8/34 PB1, PB2, PA, NP, NS and M genes and A/Cambodia/e0826360/2020 HA and NA genes

HA and NA genes were identified as A/Cambodia/e0826360/2020 by RT-PCR/RFLP gene analysis. PB2, PB1, PA, NS, NP and M genes were identified as A/PR/8/34 by RT-PCR/RFLP analysis.

The HA yield for X-361A was shown to be 4.6 ug/ml by UPLC analysis. The HA yield for A/Cambodia/e0826360/2020 was 2.8 ug/ml by UPLC analysis. The fold increase was 1.64.

SPF eggs were used for all reassortant passages.

All HA titers were tested using guinea pig red blood cells (cRBC) at room temperature.

Virus seed was shown to be sterile. Sterility testing was performed by streaking the sample on blood agar plates and incubating for 48 hours at 37 °C.
A/Cambodia/e0826360/2020 = 2.8 ug/ml
NYMC X-361A = 4.6 ug/ml
Fold Increase in yield — 1.64
