Influenza Reagent
Influenza Antigen B/Victoria/2/87 (B/Beijing/1/87-Like)
NIBSC code: 87/774
Instructions for use
(Version 4.0, Dated 29/03/2008)

1. INTENDED USE
Influenza antigen reagent 87/774 is prepared for the single radial diffusion assay of B/Victoria/2/87 antigens using an appropriate NIBSC antiserum reagent.

2. CAUTION
This preparation is not for administration to humans or animals in the human food chain.

The material is not of human or bovine origin. As with all materials of biological origin, this preparation should be regarded as potentially hazardous to health. It should be used and discarded according to your own laboratory’s safety procedures. Such safety procedures should include the wearing of protective gloves and avoiding the generation of aerosols. Care should be exercised in opening ampoules or vials, to avoid cuts.

3. UNITAGE
Antigen Reagent 87-774 contains 40 micrograms of haemagglutinin activity.

4. CONTENTS
Country of origin of biological material: United Kingdom.
Antigen reagent 87-774 is prepared from formalin-inactivated, partially purified B/Victoria/2/87 virus which was suspended in TRIS-HCL buffer containing 1% (w/v) sucrose and processed for freeze drying in 1ml volumes as described by Campbell, P.J. Journal of Biological Standardisation, 1974, 2, 249-297. The mean weight of 40 ampoules, test weighed was 1.006g with 95% confidence limits of 1.004g to 1.008g.

The reagent has been inactivated following validated procedures used to produce human influenza vaccine that is registered in the EU. This inactivated reagent has been shown to be free from residual infectious virus by testing according to the European Pharmacopeia Compendial Assay (monograph 0158).

5. STORAGE
Please note: because of the inherent stability of lyophilized material, NIBSC may ship these materials at ambient temperature.

-20°C

6. DIRECTIONS FOR OPENING
DI3 ampoules have an ‘easy-open’ coloured stress point, where the narrow ampoule stem joins the wider ampoule body. Various types of ampoule breaker are available commercially. To open the ampoule, tap the ampoule gently to collect material at the bottom (labelled) end and follow manufactures instructions provided with the ampoule breaker.

7. USE OF MATERIAL
No attempt should be made to weigh out any portion of the material.
Antigen Reagent 87-774 should be used according to the method described by Wood, J.M., Schild, G.C., Newman, R.W. and Seagraart, V.A., Journal of Biological Standardisation, 1977, 5, 237-247, with the following modification:

It is recommended that Antigen Reagent 87-774 and test B/Victoria/2/87 virus antigens should be treated with Zwittergent 3-14 detergent (Calbiochem-Behring, La Jolla, CA, USA) before single-radial-diffusion immunoplates.

Use of this reagent for assays of antigens, other than B/Victoria/2/87, may result in inaccurate potency values.

8. STABILITY
It is the policy of WHO not to assign an expiry date to their international reference materials. They remain valid with the assigned potency and status until withdrawn or amended.

Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label. Once reconstituted, diluted or aliquoted, users should determine the stability of the material according to their own method of preparation, storage and use.

NIBSC follows the policy of WHO with respect to its reference materials.

Users who have data supporting any deterioration in the characteristics of any reference preparation are encouraged to contact NIBSC.

Users of the material wishing to refer to the declared ampoule content for use in quantitative or semi-quantitative assay methods should note that the stated content of the material is based on a small collaborative study involving WHO Essential Regulatory Laboratories (ERLs) or Official Medicines Control Laboratories (OMCLs). Studies of recovery and stability of similar antigen preparations indicate that that recovery after ampouling is likely to be close to quantitative, and that no significant loss of content would be expected during storage over at least a 10 year period.

9. REFERENCES
None

10. ACKNOWLEDGEMENTS
None

### Toxicological properties

- **Effects of inhalation:** Not established, avoid inhalation
- **Effects of ingestion:** Not established, avoid ingestion
- **Effects of skin absorption:** Not established, avoid contact with skin

### Suggested First Aid

- **Inhalation:** Seek medical advice
- **Ingestion:** Seek medical advice
- **Contact with eyes:** Wash with copious amounts of water. Seek medical advice
- **Contact with skin:** Wash thoroughly with water.

### Action on Spillage and Method of Disposal

Spillage of ampoule contents should be taken up with absorbent material wetted with an appropriate disinfectant. Rinse area with an appropriate disinfectant followed by water. Absorbent materials used to treat spillage should be treated as biological waste.

### 15. LIABILITY AND LOSS

In the event that this document is translated into another language, the English language version shall prevail in the event of any inconsistencies between the documents.

Unless expressly stated otherwise by NIBSC, NIBSC’s Standard Terms and Conditions for the Supply of Materials (available at http://www.nibsc.org/About_Us/Terms_and_Conditions.aspx or upon request by the Recipient) (“Conditions”) apply to the exclusion of all other terms and are hereby incorporated into this document by reference. The Recipient’s attention is drawn in particular to the provisions of clause 11 of the Conditions.

### 16. INFORMATION FOR CUSTOMS USE ONLY

- **Country of origin for customs purposes**: United Kingdom
- **Net weight**: 1g
- **Toxicity Statement**: Non-toxic
- **Veterinary certificate or other statement if applicable**: Attached: No
